Azure
AI Foundation

Models, agents and tools on Microsoft Foundry, built as code with governance via Entra ID.

Your people already use ChatGPT, Copilot and self-built agents — and no one can say which models they run on, who's allowed to invoke which agent, or where the data ends up. Azure AI Foundation turns scattered AI adoption into one governed platform. Built as code, model-agnostic by design, with the same identity and guardrails across every agent.

Benefits at a Glance

Any Model, One Platform

A model router picks the right model per request automatically, weighing quality, cost and latency — no rewriting agents required.

Identity-Based Guardrails

Every agent runs on the same Entra identities as the rest of your landscape, with role-based access and content filters built in.

100% Infrastructure as Code

The entire platform is deployed fully automated — reproducible, version-controlled and easy to maintain.

One Platform, Three Foundations

Azure AI Foundation shares its identity and governance model with Azure Data Foundation and Azure Container Foundation — every pillar runs on the same foundation.

Managed Service

No fire-and-forget: we operate the platform so your teams can focus on building and using agents.

Reduced
Shadow AI Risk
