

Managed Dark Tenant

After a ransomware attack, this isolated tenant restores your identities and core services in hours.

AzERE, the Azure Emergency Response Environment, is your line of defense against IT disasters. It creates a secure environment for the fast recovery of your mission-critical services. With a deployment and infrastructure that are fully automated and based on Infrastructure as Code, AzERE ensures that your organization remains resilient in the face of emergencies.

Benefits at a Glance

Independent, Decoupled Environment

Dedicated, air-gapped backup environment protects critical applications and data from cyber threats by eliminating lateral movement paths.

Emergency Communication Platform

Immediate provisioning of essential communication tools, like Teams and Exchange, for a dedicated group of users, ensuring business continuity.

Secured Storage

Immutable, versioned storage backs up critical documents and data, ensuring their integrity and availability in the event of a disaster.

Autonomous Recovery

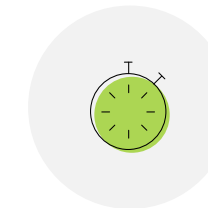

Clean and secured infrastructure to restore critical apps and data, without any dependency on other systems, tools, or processes.

Regular Fire Testing

Ensures consistency of backup data and keeps all involved parties in practice, maintaining the reliability of the backup and recovery processes.

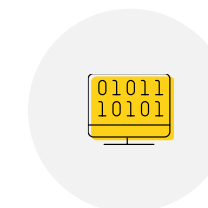

Standardized Security

Secure and Fast Recovery

Effective Crisis Communication

100% Automated Deployment (IaC)
