

# Azure Data Foundation

ERP, CRM and IoT data in one central Lakehouse, ready for Analytics, BI and AI.

ERP here, CRM there, IoT data scattered somewhere in between – and every department builds its own version of the truth. Azure Data Foundation turns fragmented data silos into a single, reliable data platform. Built as a Data Lakehouse, 100% Infrastructure as Code, with governance in place from day one.

## Benefits at a Glance

### Three Blueprints, One Decision

Databricks, Microsoft Fabric, or both – we deploy the right platform for your team, fully configured and production-ready.

### Three-Layer Data Architecture

Bronze, Silver, Gold: structured data quality tiers with end-to-end governance and access controls built in from the start.

### 100% Infrastructure as Code

The entire platform is deployed fully automated – reproducible, version-controlled and easy to maintain.

### Your Data Stays in Your Network

No vendor lock-in, no data leaving your environment – your Azure tenant remains the single source of truth.

### Managed Service

No fire-and-forget: we operate the platform so your teams can focus on deriving value from your data.

Unified Data Platform

Scalable Analytics

AI-Ready Architecture

Zero Data Silos
